SUMMARY

Backend Engineer currently working at Spotify within data infrastructure. Prior experience consists of building open banking integrations in the field of fintech, and automation of legal processes in the conveyancing domain. Committed to continuous learning, as demonstrated by pursuing postgraduate modules in Computer Science and AI alongside full-time emloyment, applying insights from its undertaking to real-world challenges.

EXPERIENCE

Backend Engineer I

Spotify an audio streaming and media service provider. 06/2025 – Present

- Operated backend systems supporting large-scale data protection and privacy compliance in a highly regulated environment.
- Delivered end-to-end solutions across distributed services and data pipelines, operating with high autonomy in systems with significant legal, financial, and reputational risk.
- Led critical correctness and reliability improvements in core services, including restoring long-broken test infrastructure and resolving production issues that caused cascading failures and service instability.
- Implemented granular data-retention enforcement mechanisms to safely roll out deletion policies across cloud storage systems while maintaining operational safeguards.
- Collaborated closely with legal and compliance stakeholders to translate regulatory requirements into defensible technical implementations, while participating in a 24/7 on-call rotation for business-critical systems.

Backend Engineer

Bloom a fintech company that provides a digitised ROSCA as a service. 09/2023 – 06/2025

- Spearheaded the design, development, and deployment of an open banking data integration project, ensuring high system reliability and full regulatory compliance.
- Implemented robust encryption mechanisms for storing customers' open banking data, including a dedicated service to manage key rotations for enhanced security.
- Built a customer address lookup service to migrate away from a third-party provider, improving performance.

Junior Developer

Juno a law firm that uses an in-house proprietary case management system to automate aspects of conveyancing. 10/2021 – 12/2022

- Developed and implemented automation solutions to repetitive legal processes in the domain of conveyancing, increasing operational efficiency and mitigating human errors, reducing conveyancing time by eight weeks compared to national average.
- Built internal tool to parse and analyse legal documents, specifically requisition letters from HM Land Registry, designed and implemented the database schema and data hydration process to store extracted data.
- Successfully integrated bespoke workflows for two new company clients and a mortgage lender, helping establish key partnerships and expanding the platform's capabilities.

EDUCATION

PGCert Computer Science and Artificial Intelligence

University of York Awarded 2023

BSc Biochemistry (Hons.)

University of Birmingham Graduated 2019

SKILLS

Languages	Java, Scala, Go, Python, Javascript, Bash, SQL
Frameworks/Libraries	GORM, Flask, Django, Alembic, SQLAlchemy
Markup/Stylesheet	LaTeX, Markdown, HTML, CSS
